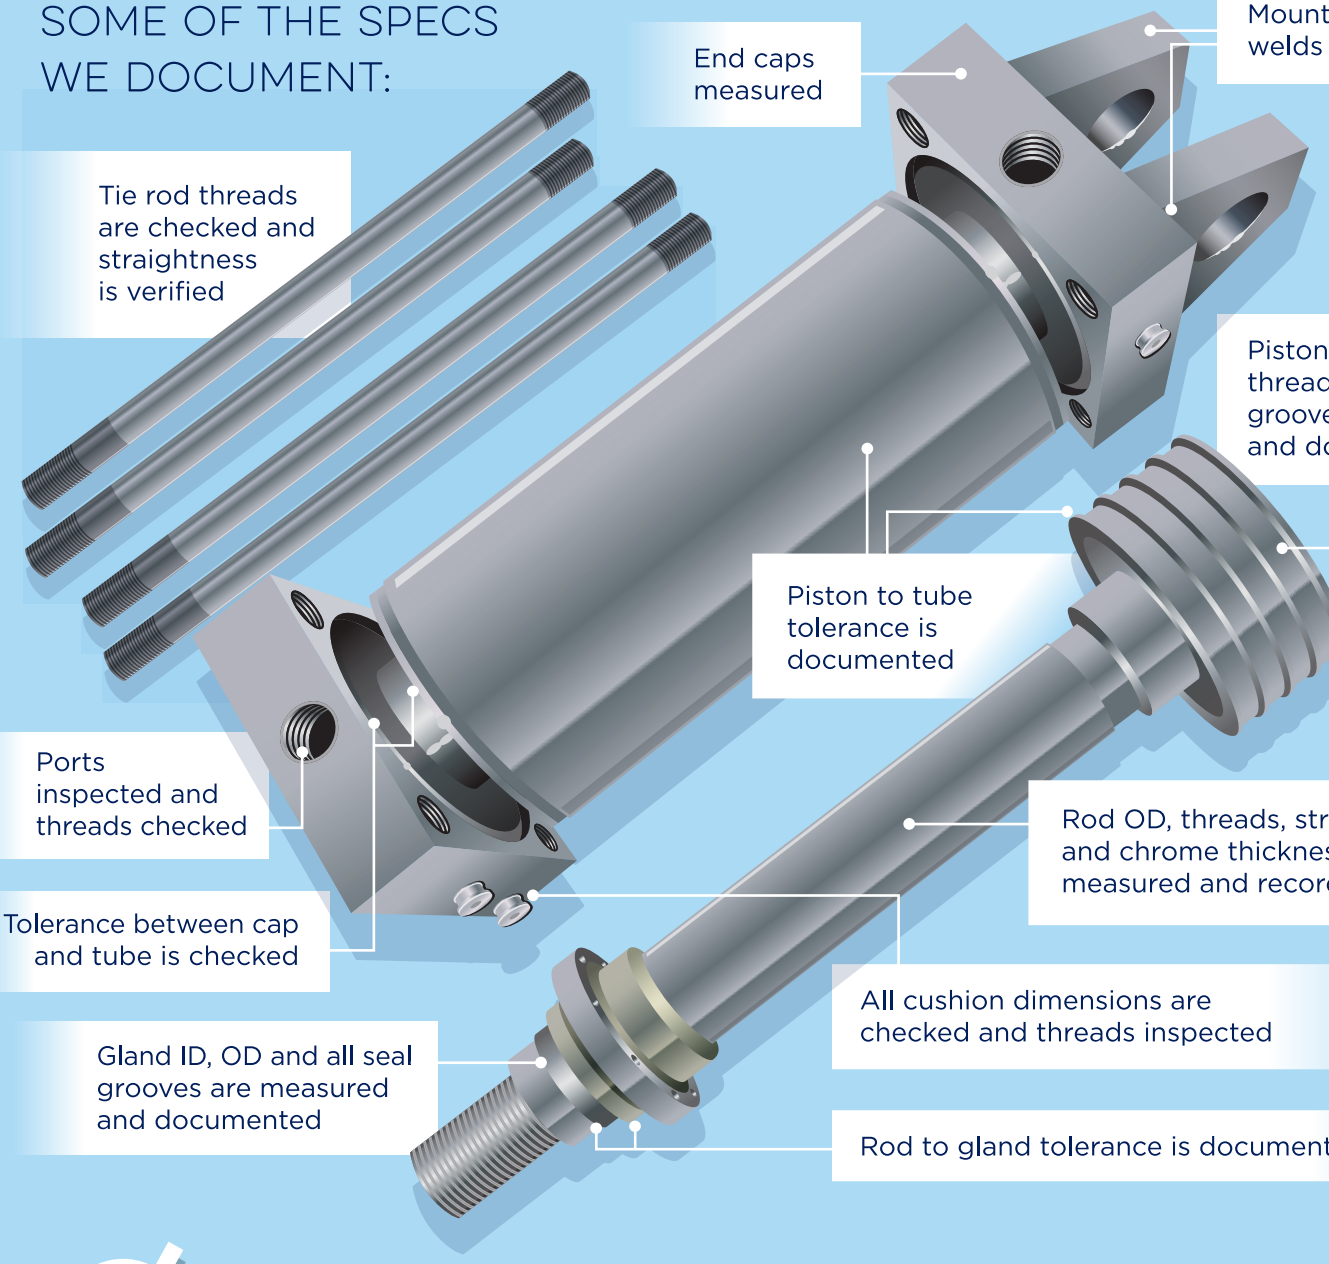
HYDRAULIC CYLINDER
REPAIR VS OVERHAUL

ISO9001 CERTIFIED

THESE ARE JUST SOME OF THE SPECS WE DOCUMENT:



- End caps measured
- Mounting and welds inspected
- Tie rod threads are checked and straightness is verified
- Piston ID, OD, threads and all seal grooves are measured and documented
- Piston to tube tolerance is documented
- Ports inspected and threads checked
- Rod OD, threads, straightness and chrome thickness are all measured and recorded
- Tolerance between cap and tube is checked
- All cushion dimensions are checked and threads inspected
- Gland ID, OD and all seal grooves are measured and documented
- Rod to gland tolerance is documented

All cylinders are dynamically pressure tested after repairs!

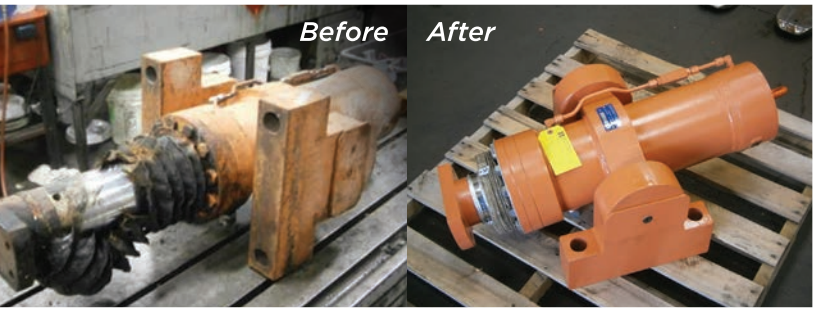
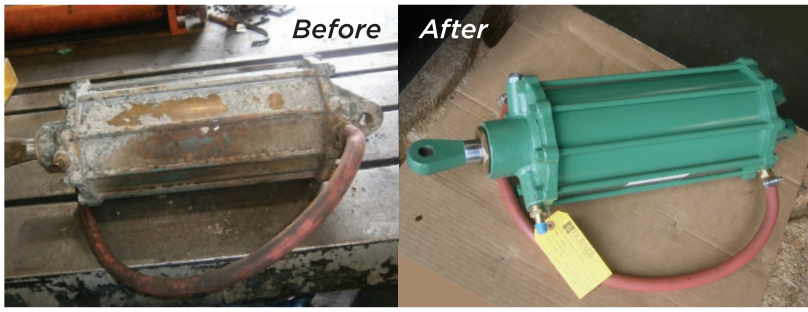
HYDRAULIC CYLINDER REPAIR VS OVERHAUL

ISO9001 CERTIFIED

Repairing or replacing some worn parts in your cylinder doesn't guarantee the cylinder is back to factory specs. Horner Hydraulics in an ISO Certified Repair Shop that performs one of the most comprehensive cylinder evaluations in the industry.





Every cylinder we evaluate has a minimum of 100 checks and measurements to insure your cylinder is as good as factory new when completed. Many repair facilities don't check all of these tolerances because of the extra costs, but ***we do because of the added quality.***
